INSTALLATION

WITH EXPERTS COMES GREATER EFFICIENCY AND PEACE OF MIND

Installing lighting materials requires specialists who can install and connect fixtures correctly and to the highest technical standards without wastage or delay, which allows you to concentrate on moving the project forward and be confident that your installer completes the installation correctly.

Light on Landscape has been a trusted supplier to the Landscape Design industry for almost 10 years. Coupled with over 30 years' experience in lighting design, our team of expert technicians provide a complete installation service, no matter what scale of installation you require. All our work and materials are guaranteed, and our technical team will ensure that the job is done right, first time, every time.

Safe and reliable service

Light on Landscape installers have expert knowledge on cabling, and can evaluate your practical and logistical requirements in order to provide a customised solution to your installation needs.

Greater efficiencies

Our installers use only the best fixtures and fittings and are both accustomed and qualified to install them correctly. As we generally only install our own product, we go the extra mile to ensure no loose ends are left untied. This extends to us leaving the space clean and tidy after completing the installation.

You'll not only save time, it's also a cost-effective option for busy contractors and design professionals.

Peace of Mind

Whether you need a simple fittings installation, a voltage conversion or a complex, large scale wiring project, Light on Landscape has the experience to assist you in bringing out the best in your design and guaranteeing its longevity.

To find out how Light on Landscape can assist you in creating a safe, stylish garden environment that is built to last, come in to our showroom or visit us at www.lightonlandscape.com.au

“Using Light on Landscape for lighting installation, I know it will be done right the first time. Installing garden lighting can be complex and Light on Landscape understands the importance of getting the technical details right.

The installation team are well briefed to get the job done correctly and efficiently. They only use quality fixtures and fittings and always give me a result my clients expect - beautiful garden lighting at the flick of a switch with no maintenance hassles.”
